

If you are interested in being an Android developer, then come onboard and upgrade your skills with our specially crafted one-month Android devoted developer tasks. To start, we have a super beginner-friendly task: create the following weather UI in AndroidStudio.

It should contain all these components:

1. Text - Current Location
2. EditText - Enter your location
3. Button - Search button
4. Text - Current temperature
5. Image - Weather condition image
6. Text - Temperature condition
7. Text - Today's weather
8. RecyclerView - Weather data for next 24hrs(Can be implemented in the later tasks)

For those who are new to android, you can download android studio from the below given website:

[Download Android Studio & App Tools – Android Developers](#)

Here is the link for reference:
