

ANDROID TEAM - WEEK 2

Believing most of you have installed android studio by now, it's time to make components like text view, image view, edit view, etc alive.

Having seen the Weather app UI, let's make it responsive this week. When you click on any of the components present on the screen it should display a toast message.

Examples

- When you click on the search button, it should say " The search button is clicked".
- When GPS is clicked, it should show a toast message, "GPS clicked".

TECH O DYSSSEY

Yellow rectangles on the image represents the toast message

Resources & References:

1. Toast

NOTE:

We hope you didn't get any problems from the past week's task. If so, don't worry, we got you! Go check out the tutorial video for week 1 and resolve your errors, then proceed with week 2. If you still have any doubts feel free to pin us in discord.

THANK YOU!
