

DESIGN TEAM - WEEK 2

Last week we did a task on graphic designing i.e we did a poster on "mobile application promotion".

Hope you learned a lot and had fun doing the task.

So, for this week we will have more interesting designs to do with hands-on experience with real-life deals.

now, we will design a UI (User interface) for a web application providing the necessary details to log in to the website.

Goal

1. To create a UI design for a web application of the "**Login page**" of a company website.
2. Recreate the reference image with all the necessary details and design elements within the UI.

Resources & Reference

Reference UI design image - [CLICK HERE](#)

Rules

- Use the reference materials and resources to design the UI Using any application like 'Figma' or 'Adobe XD'.
- You can also make use of your own creative ideas to enhance the design more professional and appealing.
- Plagiarism in any form is strictly prohibited, if found you will be disqualified from the future task.

Guide

- **FIGMA/XD** – We recommend you to use Figma as your UI/UX designing tool as this makes it a versatile tool that can be used for a variety of different design projects. Overall, Figma is a versatile tool that can be used for both UI and UX design. It has a lot of features that allow designers to create high-quality designs, and it can be used for a variety of different projects.
- There are certain rules and principles for designing UI which need to be known while designing a digital product making for better experiences for all.
